

The Secure, Web-based Remote File Access Solution Bundle

OWA Essentials includes FileWay, the perfect Remote File Access Solution for OWA 2007 because...

- 1. FileWay is a TWO-WAY solution...**
UPloading and downloading files! OWA 2007 is a one way solution...only allowing files to be downloaded.
- 2. FileWay enables specific share access by groups or individuals.**
OWA 2007 can only grant global share access to all of it's users.
- 3. FileWay enables simple browse and click for shares.**
OWA 2007 require the users to type in the full UNC path to each and every share.
- 4. FileWay works with different platforms and multiple browser types.**
OWA 2007 only supports IE 7 (and higher) on Windows...not Firefox or Safari.
- 5. FileWay is accessed directly... or through OWA or SharePoint.**
OWA 2007 remote file access functionality only works with OWA.
- 6. FileWay supports viewing of over 300 file types...plus video streaming!**
OWA 2007 provides viewing of most common file types...none of them video.

OWA Essentials™ helps transform Outlook Web Access (OWA*) into a "Power-portal"

OWA Essentials drives Outlook Web Access Utilization with this set of "must-have" applications...

FileWay

Providing secure web-based document access. FileWay enables permission-based access to user documents from anywhere with a standard browser-enabled PC or device.

FileWay with the Outlook Web Access connector, gives OWA users complete document Browse, Read and Write access directly from OWA's main menu.

FileWay also includes Secure Copy/Link solution. Users can paste live links in emails and corporate documents for secure access directly to corporate documents.

PSTWay for OWA*

Connecting PST files and Personal Folders into Outlook Web Access dramatically increases OWA's utilization and effectiveness.

OWA users can now access their Personal Folder information contained in Outlook PST files. With PSTWay users can access 100% of their important Email data and be more productive using OWA.

Complete the User Experience

PSTWay completes the promise of a full Outlook-like experience in Outlook Web Access. For many organizations OWA use has not grown to become the killer application it was destined to be. It's a simple concept if the users do not have complete access to their information they will not use it.

Secure, Web-based Remote File Access Solution Bundle

Our 5 Prime Directives

1. Be Secure:

Every remote access solution must ensure complete end-to-end security from the remote browser to the desktop computer without introducing new vulnerabilities or gaps in the existing security infrastructure. Our solutions must enforce existing access privileges, while allowing the implementation of stricter policies for remote network access as needed.

2. Be easy to use:

Our end users must enjoy seamless, convenient, and intuitive access to the full range of resources they could usually access from their desktop systems with complete read-write capabilities, and without restrictions on file sizes or dates.

3. Be easy to deploy:

Our solutions must not require the time-consuming and resource-intensive installation and support of client software, on either the local desktop or on the remote systems to be used. Each solution must be designed to be intuitive enough to use with minimal user training while scaling easily and cost-efficiently as the user base expands.

4. Be easy to administer and support:

Our solutions must minimize the impact on existing organizational resources. They must be both easy to administer and require little or no support. Our approach will eliminate the need for dedicated help desks and large admin. staff. Our help desk will provide smart and friendly support and be available to find answers for any other implementation and management questions.

5. Be easy to fully integrate:

Our solutions must avoid introducing new complexity and duplication of effort, and fit seamlessly into our customer's existing information infrastructure. Our solutions must help our customers ensure full value from their existing investments in web-enablement, security, or other systems and policies.

AttachWay for OWA *

Enabling OWA email attachments. At last Outlook Web Access users have the ability to attach and send internal documents with their emails. Using our simple OWA Attachments button allows users to fully browse their internal folders, locate and send files with their email.

AttachWay delivers;

- Enhanced Security as no documents need to be downloaded in order to send them
- Secure viewing of documents prior to sending is built in.
- Huge bandwidth saving as files remain inside until exchange sends them, no downloading or uploading required.
- Group productivity as AttachWay even allows you to save existing attachments to your internal folders.

About Everywhere Networks

Since its founding in 2003, Everywhere Networks has focused on providing manageable solutions for making institutional networks accessible for selected groups of users, in a secure manner from any browser-enabled device... anywhere.

Through our Everywhere Office platform, application access, security, and management are successfully integrated into a single, secure, gateway that enhances remote worker and partner productivity, reduces integration complexity and maintenance, and offers a host of manageable security features to protect internal assets.

Our success to date in the educational and corporate marketplaces has validated our vision and we are fully committed to continue.
